The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Bersworth (2,847,308).

Bersworth, at example 4, discloses a method in which milk, having 10 ppm of copper is treated with EDTA, stirred and filtered. The filtrate is free from copper. In this case milk is regarded as edible oil in water emulsion.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bodor (EP 0233565).

Bodor discloses treating fermented milk to electrodialysis to give a mineral depleted intermediate product. The demineralization can be carried out for a period of time long enough to obtain milk containing no

potassium, sodium, calcium magnesium, chloride or phosphorous. The claims appear to differ in the suggestion of the removal of copper and iron. Whereas copper and iron are not explicitly mentioned, one of ordinary skill in the art would expect iron and copper to be removed because these ingredients are minerals. The dialyzed fermented milk is used as an ingredient for the preparation of reduced fat water in oil emulsion spread.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Carolyn A Paden whose telephone number is (571) 272-1403. The examiner can normally be reached on Monday to Friday from 7 am to 3:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Keith Hendricks can be reached by dialing 571-272-1401. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
